

CSCE 156 - Lab 10.0 - JDBC in a Web App II - Worksheet

Names: _____

1. Think about how you handled the data conversion from the strings from the web-form to the database. What happens if a user enters non numerical data for a numerical field (year)? What happens if a user enters a blank field? What part(s) of the application should be responsible for such data conversion/validation?
2. If you didn't try to lookup the band ID and just inserted a new band, would this work? Is this outcome a good design?
3. Demonstrate that your application works by showing your instructor
